

Xu's Work on Bioproduction Systems is Published

Dr. Jianfeng (Jay) Xu, research professor in agriculture and Arkansas Biosciences Institute, is lead author of an article recently published in *Biotechnology Advances*. Xu, an Arkansas Research Alliance Fellow, and his co-authors address the critical challenges for plant cell-based bioproduction systems. They also propose innovative strategies to unlock the full potential of this production platform, along with forward-thinking solutions emphasizing cellular engineering. The article is [online](#).
